FIG. 5B

HIV-1 Protease protein surface showing an actual ligand as determined by x-ray co-crystal structure and showing the pocket of highest volume as calculated by the method of this application (blue).

FIG. 6

Heat Shock Protein 90 surface showing an actual ligand as determined by x-ray co-crystal structure and showing the pocket of highest volume as calculated by the method of this application.

FIG. 7

Stromelysin protein surface showing an actual ligand as determined by x-ray co-crystal structure and showing the pocket of highest volume as calculated by the method of this application.

FIG. 8

Dihydrofolate Reductase protein surface showing an actual ligand as determined by x-ray co-crystal structure and showing the pocket of highest volume as calculated by the method of this application.
